**Subject:** Re: Call with MosquitoMate - WB1 EUP

Hi All,

Please find three attachments in preparation for the call on Wednesday. We will be discussing a possible one year extension request for the WB1 EUP in Puerto Rico only.

As per my prior email, the key matter is that, because the WB1 Section 3 PRIA date is two months away, we remain very reluctant to make this request, due to concerns that an EUP extension request could complicate or delay a decision on the WB1 Section 3. Additionally the request may confuse reviewers that we seek additional efficacy data. This is absolutely not the case, and we believe that data from Miami and Stock Is., FL are adequate and representative of tropical conditions that occur in the caribbean (e.g., Puerto Rico).

The EUP extension request is motivated by the CDC, which sees this as a way to avoid interruption for the recently started COPA project. Specifically, the EUP extension would not be for additional entomological efficacy data, i.e., pesticidal impact. Instead, the EUP extension request would be for epidemiological efficacy data, i.e., reduction in human clinical disease. The CDC will be on the call to answer questions, including the timing required for such a request to be utilized.

In the event that we agree to proceed with the extension request, I've attached some drafts showing examples of such a request. For simplicity, the information is intended to change minimally from the existing, active DOCs. I am happy to discuss these on the call, if wanted.

Lastly, in the absence of an objection, I've ask Nigel Snoad from Verily to also join the call.

Thank you and I look forward to talking on Wednesday,  
Stephen
